

ELEMENT 400 PRODUCTIVITY REDEFINED

Adaptable solutions for the metal
processing industry

ELEMENT

INNOVATING PLATE PROCESSING

High-speed lifters and advanced process optimisation techniques result in high productivity gains.

Optional safety devices provide protection for employees and equipment.

Industrial quality components combine to provide dependable precision performance in a sleek protected platform.

Independent servo driven tools provide versatile processing options. Reduce setup time by spacing or parking multiple tools automatically through the part programme or at the control (optional).

CNC control designed to improve operator efficiency, eliminate redundancy and to provide remote transparency of important production data.

For over 125 years we have provided quality products and reliable services for the metal processing industry.

The ELEMENT is a flexible processing machine that can be tailored to fit your unique application. A variety of different sizes and tools can be packaged with powerful software to provide maximum productivity and unmatched performance. The ELEMENT seamlessly integrates with multiple material handling systems to complete your metal processing solution.

A high-angle, top-down photograph of an industrial robotic welding cell. A black robotic arm with blue joints is positioned over a large, flat metal workpiece. The arm's end effector is actively welding the metal, creating a bright, intense light and a spray of orange sparks that radiate outwards. The surrounding environment is a clean, industrial setting with various metal structures, railings, and components. The lighting is dramatic, highlighting the sparks and the metallic surfaces.

ELEMENT 400

CARRIER OF SOLUTIONS

PROCESS OPTIONS

Plasma

Several advancements in plasma technology over the last few years allow for precision cutting of mild steel, stainless steel and aluminum. Most recent development has been focused on improved hole cutting and longer consumable life, providing fewer secondary operations and lower operating costs.

The best plasma system to fit your application will include collision protection and will be mounted on one of our modern lifters. Along with other process optimizing features, we can provide higher productivity with all industry standard plasma systems.

PROCESS OPTIONS

Oxyfuel – ALFA

For over 125 years, Messer Cutting Systems has provided and developed leading-edge technology for oxyfuel cutting machines which deliver high-quality cuts, reliable service, and considerable savings to the cutting process.

Oxyfuel cutting is the most economical method to produce high-quality parts from mild steel and low alloy steel. The ALFA torch contributes to low operating costs by reducing setup and process monitoring labor. Automatic internal ignition eliminates manual operations, consumables can be changed without tools, height sensing quickly positions all torches at the optimum cut height to substantially reduce pierce time, and the integrated sensing system allows the torch to cut right to the edge of the plate without fear, thus increasing plate utilization.

PRECISION CUTTING OF
FERROUS AND NON-FERROUS
MATERIAL

+ Maximum thickness up to 150 mm
(non-ferrous material)

HIGH QUALITY RESULTS IN
MILD STEEL AND LOW ALLOYS

- + Reduce time and labor with multiple torches
- + Insensitive to dirt and environmental influences
- + Quick change of nozzles reduces non-productive time

PROCESS OPTIONS

Laser

Laser cutting is a high-precision technology that is used in numerous branches of industry. By using a focussed laser beam, materials are cut with impressive accuracy and speed.

This method offers many advantages, such as narrow cutting edges, minimized material deformation, reduced heat input and high cutting quality. Thanks to the enormous advances in laser power in recent years, thicker materials can now also be processed.

BEVEL OPTIONS

Bevel-S

Accurate and repeatable cut parts are created with this unique design that does not require movement of the entire machine. The plasma torch can therefore tilt very quickly, resulting in maximum plate utilisation.

With only two axes required to tilt the torch in our industry-proven skew axis design, precision cutting of small holes to the most complex bevel contours is possible.

Collision protection, a simple pneumatic torch lead management system and a few recent enhancements ensure that production requirements are easily achieved.

HIGH-QUALITY RESULTS IN MANY MATERIALS

- + Narrow cutting edges
- + Minimal material deformation
- + High cutting quality
- + Can be combined with material handling

JOB SHOPS, OEMS AND OTHERS WITH HIGH QUALITY AND HIGH PRODUCTION EXPECTATIONS

- + +/- 45° bevel angles
- + I, A, V, Y, X and K weld profiles
- + Interpolation of the bevel angle
- + Plow bolt and countersink holes

MARKING OPTIONS

Inkjet Marker

Parts often need non-permanent marking for secondary operations such as layout lines or simple part identification as they move through production. The Inkjet Marker produces markings that do not damage the plate and are not visible after painting.

Production does not slow down for marking as the marker creates text at speeds of up to 17 characters per second. Available with 7, 16 or 32 nozzles.

Black ink only systems satisfy most requirements while optional hardware can be used with pigmented ink to create higher contrast results for some applications.

MARKING OPTIONS

Pin Marker

For applications which require a more permanent mark, the Pin Marker uses a vibrating engraving needle to create easily legible characters or layout lines.

In just a few seconds, the robust and low-maintenance marker can create text as small as 10 mm.

The results are visible on a variety of materials, including primed, rusted or mill scale plate. In some cases, the mark may still be visible after painting.

NON-PERMANENT
MARKING OF LINES, CON-
TOURS AND CHARACTERS

- + Dye-based ink MEK (Methyl Ethyl Ketone)
- + Dries in 3–5 seconds
- + Will not wipe off with water
- + Standard text height at 9, 12, 18, 27 mm
- + Optional 45 and 67 mm text

LINES, CONTOURS AND
CHARACTERS THAT ARE
MORE PERMANENTLY VISI-
BLE

- + Clear, physical markings that cannot be easily removed
- + Variable marking depth

MARKING OPTIONS

HF Punch Marker

For efficient further processing of workpieces, it is often necessary to apply permanent markings. These include lines, dots, alphanumeric and other marking options. For this purpose, the Punch Marker can produce markings of single point and dotted lines in seconds.

Driven with air pressure the Punch marker achieves a high impact force on many metallic surfaces. Variable marking depth and dot spacing ensures marking even on less ideal surfaces.

SPECIAL FEATURES

Cutting Plan Alignment

A programmer will nest parts as efficiently as possible to get the best plate utilisation. The operator equally is charged with reducing scrap as parts are processed. Multiple times per day, a plate is placed on the cutting table and then matched or aligned to the plan.

The bright dot of a laser pointer or the crisp image of the plate edge on the Global Connect allow the operator to quickly capture the location or angle of the plate. This operation can even be automated using an optional laser system to increase productivity.

GOOD VISIBLE MARKINGS
EVEN ON DIFFICULT SHEET
SURFACES

- + Good visibility of contours on many sheets
- + Resistance and durability, e.g. in the bending process or in abrasive and corrosive stresses
- + Low operating costs and high availability

REDUCE SETUP TIME AND
ELIMINATE SCRAP

- + Manual operation with laser pointer or camera
- + Automatic edge detection using laser

SPECIAL FEATURES

Motion System

Is the cut edge smooth? Are the holes round? Are the corners sharp? Are the parts accurate? The answer to these questions ultimately speaks to the quality of the machine. An expert operator, optimised cutting parameters, and new consumables will not create a good part if machine movement is rough and the tool does not stay on path.

The ELEMENT is built with helical rack and pinions, precision linear ways, and heavyweight rails as a foundation for smooth motion. Large AC servo motors provide exceptional cut part quality by quickly accelerating the cutting tool in and around holes and corners.

SPECIAL FEATURES

Safety

Functional safety technology prevents damage to machinery and minimises downtime, its core job is to protect people. Light curtains positioned on the front and rear of the machine offer protection when loading and unloading the cutting table. These devices immediately stop the machine when an obstacle passes through the viewing field. Additional protection is provided by a unique sliding system that also stops the machine in the event of contacting an obstruction.

Most tools on the machine already includes a level of protection for the hardware itself. For example, all plasma torches feature our SureStop magnetic collision sensor which quickly stops the machine and turns the process off. Recovery is simple and production resumes.

PRODUCE THE HIGHEST
QUALITY PARTS IN THE
SHORTEST AMOUNT OF
TIME

- + Positioning speed up to 50 m/min
- + High acceleration

LEVEL OF PROTECTION FOR
THE MACHINE BUT MORE
IMPORTANTLY THE OPERATOR

- + Stational light curtains and other overall machine safety features are available
- + Internationally certified TwinSAFE on-board
- + Key switch prevents machine movement during maintenance operations and when performing consumable exchange

OMNIWIN

Ideal for work preparation

OmniWin is a powerful, easy to use designing and nesting software that saves time, material and costs. It is the ideal tool for work preparation in oxyfuel, plasma and laser cutting with CNC machines, taking over all cutting tasks for order-based production.

The software is both effective and economical – for small productions as well as for just-in-time manufacturing with changing quantities in custom cutting operations.

OMNIBEVEL

The tool for bevel cutting

OmniBevel is the software for dimensionally accurate parts and the leading product for bevel cutting. The post-processor module with a graphical, easy to use interface delivers optimal cutting results.

It stands for straight cuts, cylindrical holes, exact bevel angles and enormous flexibility. Almost all possible technology parameters and operation details are adjustable.

YOUR DIGITAL WORKFLOW

PRODUCTION DIGITISATION

Our solutions ensure maximum transparency in operations management, production planning and control.

OMNIFAB

Software suite for digital transformation

The OmniFab Suite digitizes your processes from sales quotes, production planning, control and monitoring to business process analysis in the entire value chain.

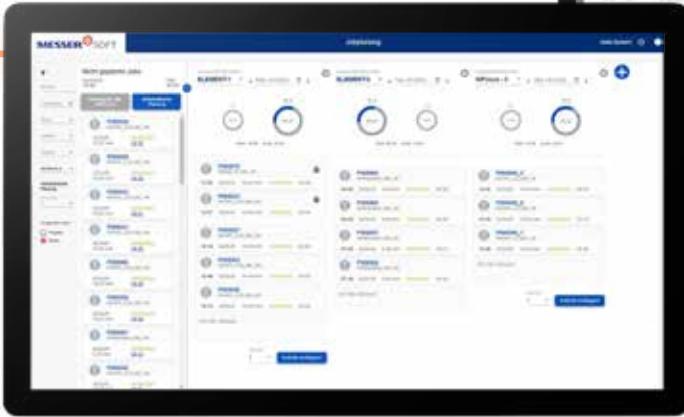

You gain real added value from the >enhanced< machine data in real time through the integration of all systems. Control your material handling systems like loading/unloading stations, towers, material transport devices and more with OmniFab - even on mobile devices.

GLOBAL CONNECT

Everything at a glance

With OmniFab Job Management, you always have an overview of all jobs – even on the Global Connect. Process your orders on the right machines at the right time and with optimal utilization, regardless of whether you plan manually or automatically. Via OmniFab PDC, feedback from the running operation comes in real-time from the machine operators. You can use this information to react quickly to unforeseen events and make the right decisions.

**OmniFab
Job Management**

**OmniFab
PDC Digital
Working Paper**

**OmniFab
PDC Parts Status**

**Novice operators become experts.
Programmers control the process remotely.
Maintenance employees prevent downtime.
Production managers know the job status
and reduce operating costs.**

All of this is possible if you see the CNC control as the connector between production plant, machine and its operator to allow local as well as remote production scheduling. Data transparency to others within the organisation provides key information which is needed to make better business decisions.

- + Flexible job-centric environment for new operators to learn quickly and experienced operators to excel
- + Job scheduling for improved production flow
- + Quick processing of past or repetitive jobs
- + Local nesting and standard shape library for just-in-time workflow

A Maximum Table Width **B** Machine Rail Gauge **C** Machine Working Width **D** Overall Machine Clearance

2.100	2.600	4.700	5.700

5.100	5.000	7.100	8.100
5.600	6.000	8.100	9.100

All dimensions in mm

Standard features

- + Cutting widths 1.600 mm to 5.100 mm
- + Cutting length up to 47.000 mm
- + Cuts material up to 300 mm
- + Cuts mild steel, stainless steel, aluminum
- + Positioning speeds up to 50 m/min
- + Reinforced steel weldment construction with high rigidity beam
- + Floor or H-Beam installation
- + Up to six tools (maximum two plasma stations)
- + Global Connect, Windows® based with easy-to-use operator interface
- + 18.5" touch control panel, tilt and rotatable for operator comfort
- + Virtual Service remote consultation and diagnostics
- + SureStop collision sensor with easy and accurate reset
- + Meets all safety requirements

Optional features

- + Plasma Bevel Unit Bevel-U and Laser straight
- + ALFA or MS 932 oxyfuel torches
- + Advanced oxyfuel technology with Omniflow automated gas regulation system
- + Auto torch spacing with programmable torch selection
- + Marker systems: Plasma, Inkjet, Pin and HF Punch Marker
- + Digital video camera
- + Manual plate alignment using a digital video camera
- + Laser pointer
- + Programming and nesting software
- + Operator glare curtain
- + Zoned exhaust tables
- + Dust collection systems for various applications
- + Material handling systems
- + Visual Service support

CREATING SOLUTIONS BEYOND MACHINES

What we stand for

PRODUCT

AUTOMATION

DIGITAL

SERVICES

KNOW-HOW

Messer Cutting Systems is a global supplier of cutting-edge technology for the metalworking industry. With over 900 employees worldwide in over 50 countries, we maintain a constant dialogue with our customers to achieve sustainable user-oriented innovation.

Our portfolio embraces the themes PRODUCT, DIGITAL, SERVICES, AUTOMATION and KNOW-HOW. We will live up to our claim "Creating Solutions Beyond Machines" not just with the most modern cutting systems and solutions for oxyfuel technology.

Appropriate services and training, our own software applications as well as the integration of solutions from our technology partners, e. g. in the field of automation, complete the machine to give forward looking total solutions.

Our Know-how combined with our customer-oriented attitude and actions make us the world-wide partner of choice for innovative total solutions on all aspects of cutting systems for 125 years.
